

## Animal Behaviour Laboratory- PNB 3S03. Dr. Reuven Dukas. Winter 2012

**Location:** PC 204, 116

**Time:** Tuesday 14:30-17:20; January 3 - April 3, 2012

**Instructor:** Dr. Reuven Dukas ([dukas@mcmaster.ca](mailto:dukas@mcmaster.ca), PC 104).

**Teaching Assistants:** Zac Durisko ([duriskzt@mcmaster.ca](mailto:duriskzt@mcmaster.ca); PC 151, 26042), Adam R Reddon ([reddonar@mcmaster.ca](mailto:reddonar@mcmaster.ca); PC 152, 26037)

**Office Hours:** Please e-mail us to schedule an appointment.

**Web page:** <http://psych.mcmaster.ca/dukas/abl.htm>

**Textbook:** Pechenik, J. A. 2007. *A Short Guide to Writing About Biology*, 6th ed. (or any other edition). Longman, New York. (Required text in a few Biology courses).

**Objectives.** By the end of this course the students will be able to:

1. Formulate a testable prediction.
2. Design a proper experimental protocol to falsify that prediction.
3. Verify that the protocol has the power to falsify the prediction. Critically assess all possible alternatives and include additional treatments, controls, or further experiments if necessary. Design a blind protocol.
4. Consider issues of sample size, statistical analyses and statistical power.
5. Consider issues of safety and animal ethics.
6. Plan all the necessary hardware and logistics for the experiment.
7. **Write a research proposal including all the above components.**
8. Conduct the experiment and record the data.
9. Analyze the data and draw conclusions.
10. Discuss the results, suggest weaknesses, alternatives and further experiments.
11. **Write a research paper that includes all of the above elements.**
12. **Give a PowerPoint-assisted presentation of the research paper.**

**Assumptions** about the students' prior knowledge: evolution, statistics, animal behaviour, and computer software including Excel. Students should refresh their knowledge if necessary.

**Outline:** The course will consist of two class experiments followed by independent projects carried out and presented by pairs of students. See the schedule.

**Project:** Must be a planned experiment with a sufficient number of individuals of an invertebrate species and conducted according to the scientific method, academic ethics, and animal-care regulations. Ideas for experiments may be found in animal behavior textbooks and journals, and the following book kept on reserve in Thode library: Ploger BJ, Yasukawa K, 2002. *Exploring Animal Behavior in Laboratory and Field* (Academic Press.)

**Assignments and grades:** Each student must e-mail his / her **independently written assignment** to Dr. Dukas **by noon** on the dates indicated below following the instructions on the checklist. **The work you submit must be written, revised and edited only by yourself.** All grades will be given in percentages. The final mark will be calculated as noted in the schedule, with 10% given for quality of participation in class discussions, and performance in the experiments and independent project. Late papers will be subjected to a penalty of 10% per day. **Lab attendance is mandatory. Unexcused misses will be subjected to a penalty of 10% per day.**

**Academic dishonesty:** Academic dishonesty consists of misrepresentation by deception or by other fraudulent means and can result in serious consequences, e.g. the grade of zero on an assignment, and/or suspension or expulsion from the university. It is your responsibility to understand what constitutes academic dishonesty. For information on the various kinds of academic dishonesty please refer to McMaster's Academic Integrity Policy, specifically Appendix 3, located under the Senate Policy Statements in the online calendar. **We will take measures to**

verify the uniqueness of your work. This may include consultation with other instructors at McMaster and the use of electronic search engines and data bases.

**Schedule (Pechenik's chapters are based on the 6<sup>th</sup> edition, 2007)**

Date	Activity	Class Meeting	Assignments & grades
Jan 3	Introduction: preparing, conducting & presenting animal behaviour research. Choosing a project	204	Ch. 1-3.
Jan 10	Analysing experimental data	204 / 205	Ch. 4.
Jan 17	Experiment 1: Sexual attractiveness of mated female fruit flies	<b>116</b>	Ch. 5-6. Proposal 1 (2.5%) <b>Please bring calculators &amp; stopwatches</b>
Jan 24	Presentation tutorial & project discussion	204	Ch. 9. Paper 1 (7.5%)
Jan 31	Experiment 2: Socially influenced behaviour in fruit fly larvae	<b>116</b>	Ch. 10. Proposal 2 (5%) <b>Please bring calculators &amp; stopwatches</b>
Feb 7	Proposal presentation ( <b>team</b> )	204	Ch. 14. Proposal outline ( <b>written independently by each student; 3%</b> )
Feb 14	Research project	No	Paper 2 (10%)
Feb 28	Research project	No	Final proposal ( <b>written independently by each student; 12%</b> )
March 6	Research project	No	<b>Each team must meet with Dr. Dukas by Mar. 6</b>
March 13	Research project	No	
March 20	Research project	No	
March 27	Project presentations ( <b>team</b> )	204	Project presentation (10%)
April 3	E-mail project papers	No	Project paper ( <b>written independently by each student; 40%</b> )
